Gaaskjolen Ranch

13701 SD Hwy 73 Meadow, SD 57644 605-788-2953

Dear Cattlemen:

Enjoying the winter? Neither are we but just the same, welcome to our “Building with the Basics” bull sale. Our number one goal is to build better Angus cattle. We have seen a decline in prices from last year and the year before but it is still a great time to be in the cattle business. It’s your success and sustainability that drives our operation and there has never been a time when the right genetics were worth so much. We feel there is a bull for everyone in the offering with a nice offering of both Hybrid, Commercial Angus and Purebred Angus bulls. We welcome any comments, suggestions, or concerns you may have and will go to great lengths to make your experience of owning a Gaaskjolen bull a profitable and enjoyable one.

Our 2017 sale offering will consist of popular proven bloodlines as well as some fresh young genetics. You can put together half brothers for consistency, moderate birth weights for calving ease, or bulls with substance, bone, eye appeal and ease of fleshing. The choice is yours. Whatever helps your program succeed.

The bulls have been through a complete vaccination program and poured several times. In addition to the normal protocol for respiratory diseases, they have been vaccinated and boosted for foot rot. As in past years they have been fed a complete commercial CHS feed called Bull Challenger, a feed designed with growing young bulls in mind.

Again this year the birth weights are a mixture of being weighed on a digital scale, a spring scale, taping a foot, and a few are an educated estimate. In all cases they were born unassisted and calving ease shows up in almost every pedigree. Some are recommended for heifers.

This is a strong set of bulls and represents roughly a third of our bull calf crop. They will be sold as commercial bulls with the exception of the registered angus. They are registered and have current EPD’s. We invite you to browse through the catalog and find the right bulls for your operation. If we can be of any assistance just give us a call and thanks for considering our bulls.

The Gaaskjolen Family

Breeder’s Guarantee:

First Breeding Season Guarantee: All bulls will be sold as guaranteed breeding animals and will have been semen tested by Dr. Jenny Meyer prior to the sale. Bulls will be kept at our risk until delivery and then the risk will be shared with the buyer until the end of breeding season. In the case a bull is injured and loss of use occurs prior to Sept. 1 2017 a replacement bull will be offered providing one is available. If a satisfactory bull is not available, the bull will be covered for 50% of the purchase price minus the salvage value and given as a credit at next year’s sale. This is NOT a mortality guarantee and it is recommended that anyone needing that coverage buy mortality insurance.

Trucking and Yardage:

We will deliver the bulls free within 250 miles or you can haul your bulls home sale day and deduct \$50 per head. Bulls will be kept free of charge at the buyer’s risk until April 1st and then delivered.

Sale Day Phone: (605) 374-3877
Auctioneer: Scott Weishaar

You can view the sale on the internet at:
www.lemmonlivestock.com

Volume Discounts:

Volume discounts are available to a single buyer.

7	0.8	59	108	29				

Should work on heifers. Pedigree stacked with maternal power.

Some of the hardest workers on the place. Don't know how to run a ranch without them!

Definitions of Igenity Traits Reported

Maternal Traits

Birth Weight – Variation in birth weight a heifer or bull will pass along to its offspring.

Calving Ease Direct (CED) – Percentage of unassisted births, indicating greater probability that a calf will be born unassisted out of a first-calf heifer. Genetic factors such as birth weight and shape of the calf contribute to CED. A higher value is greater calving ease.

Calving Ease Maternal (CEM) – The probability that a first-calf heifer will calve unassisted. CEM includes all genetic factors that impact a heifer's ability to calve, such as pelvic area and her genetic contribution to birth weight. A higher value is greater calving ease.

Stayability (STAY) – The chance a heifer will remain in the herd as a productive cow until at least six years of age. A higher value is desired.

Heifer Pregnancy Rate (HPR) – A heifer's chance of conceiving over a normal breeding season. A higher value is desired.

Docility (DOC) – The animal's genetic potential to be calm or have calm offspring. Higher scores indicate a higher percentage of calves with an acceptable disposition.

Milk – Is expressed as pounds of calf weaning weight affected by the milk production of a calf's dam. This is not a prediction of actual pounds of milk produced.

Performance Traits

Residual Feed Intake (RFI) – This measure is an indicator of feed efficiency. It is the difference in animals' daily consumption of feed to achieve the same level of daily gain. Lower RFI indicates greater feed efficiency.

Average Daily Gain (ADG) – Based on pounds of gain per day. The Igenity score for ADG identifies an animal's genetic potential for post-weaning growth.

Carcass Traits

Tenderness (TEND) – Animals' genetic potential for carcass tenderness as measured by the Warner-Bratzler Shear Force (WBSF) test. A higher score indicates greater tenderness.

USDA Marbling (MARB) – Marbling score indicates the degree of marbling in the rib eye at the 12th rib rated in USDA marbling units.

Ribeye Area (REA) – Ribeye Area estimates muscling in a beef carcass, and is measured in square inches of the rib eye at the 12th rib

Fat Thickness (FAT) – Fat thickness is scored as depth of fat in inches over the ribeye muscle at the 12th rib. Higher fat thickness scores equate to lower lean yield.

How to Use Your Scores

Comparing scores between profiled animals: The examples below show you how to equate Igenity scores to variations in Molecular Breeding Value effects from the genetic table.

Heifer Pregnancy Rate (HPR)	Igenity Score	Genetic Effect	Description
Animal A	8	10.2%	Animal A will produce daughters with a 7.3% higher probability of conceiving during a normal breeding season compared to daughters of Animal B.
Animal B	3	2.9%	
		7.3%	

Stayability (STAY)	Igenity Score	Genetic Effect	Description
Animal A	8	23.6%	Daughters of Animal A have a 15.7% greater probability of staying in the herd until six years of age than daughters of Animal B.
Animal B	3	7.9%	
		15.7%	

Average Daily Gain (ADG)	Igenity Score	Genetic Effect	Description
Animal A	8	0.27 lbs.	Animal A is expected to produce progeny that will gain 0.19 pounds more per day than progeny of Animal B, and therefore weigh 28.50 pounds more after 150 days on feed.
Animal B	3	0.08 lbs.	
		0.19 lbs. per day	

Residual Feed Intake (RFI)	Igenity Score	Genetic Effect	Description
Animal A	8	1.6 lbs.	Progeny of Animal B are predicted to consume 1.1 pounds less feed per day than progeny of Animal A to achieve the same daily gain.
Animal B	3	0.5 lbs.	
		1.1 lbs.	

Thank you for considering our bulls!

Faith to Coal Springs Wagon Train
